Evaluation of Green Banana Powder as a Dietary Carbohydrate Suppressor: Slowing Fast Carbohydrate Absorption and Stabilizing Interstitial Glucose Variability

12-Hour Graph (Nov 1) - 89 mg/dL In Range

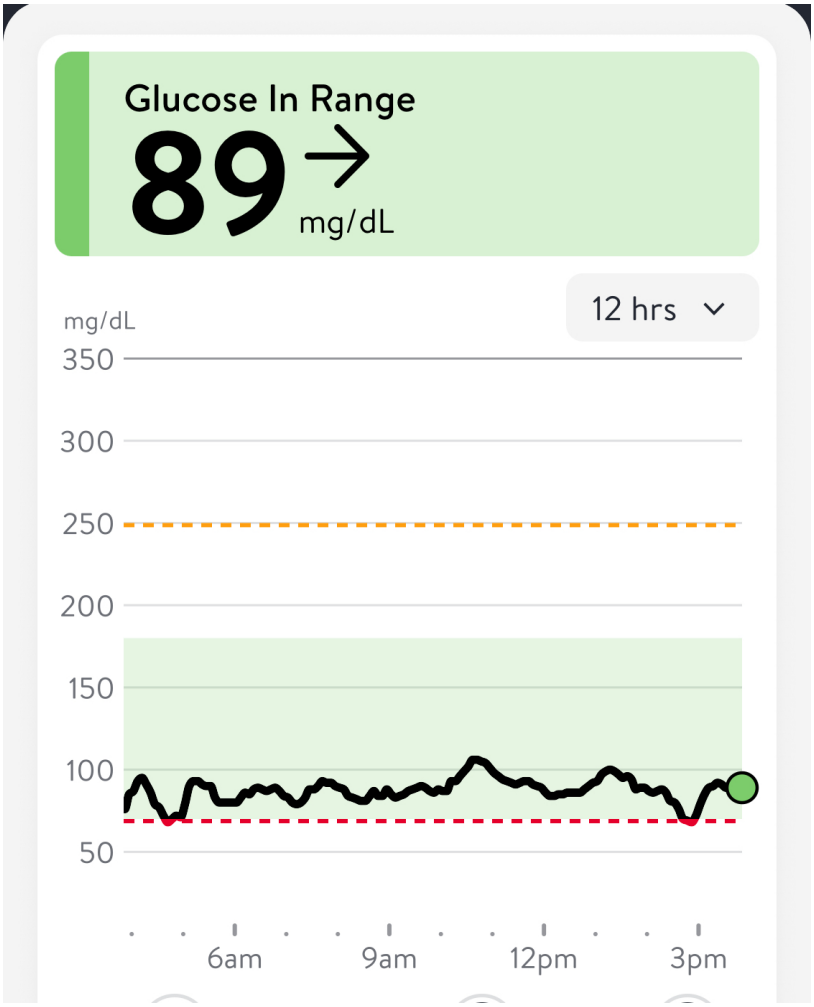

Figure 1: 12-hr view from upload. Current 89 mg/dL flat arrow. Trace 70-106 mg/dL. Demonstrates low variability during fiber evaluation. Two brief dips to ~67-70 mg/dL at ~04:30 and ~14:40 match logged fingersticks 58/63/66 vs sensor 69-70, consistent with interstitial lag.

Baseline-Matched Overlay - Corrected Legend

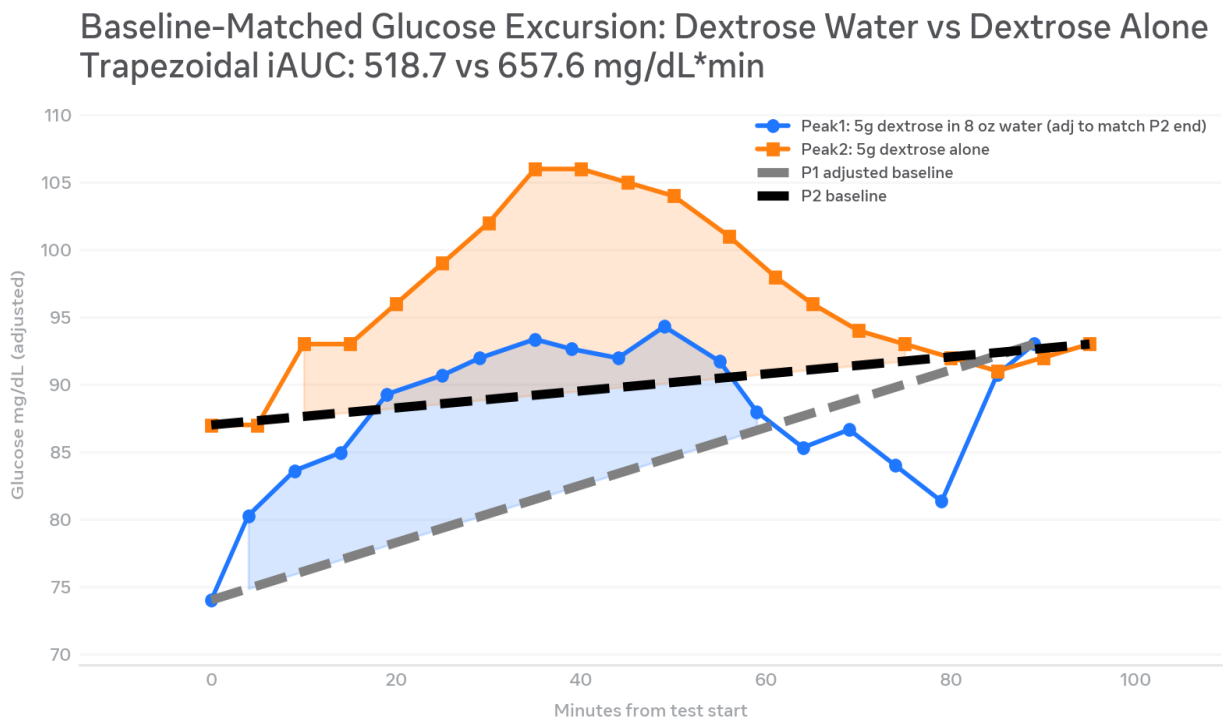

Figure 2: Blue (5g dextrose + 2.5g GBP) baseline extrapolated to match Orange ending baseline (93 mg/dL) with +6.0 mg/dL linear ramp. Orange = 5g dextrose only in 8 oz water. Blue = 5g dextrose + 2.5g GBP in 8 oz water. Trapezoidal AUC. Orange iAUC 657.6 vs Blue iAUC 518.7 mg/dL*min = 21.1% lower with GBP.

Methods

Order: 1) Extrapolate Blue baseline to match Orange ending, 2) Extract raw 5-min data with adjusted baseline, 3) Trapezoidal AUC = sum[(y_i + y_{i+1})/2 * dt]. iAUC above baseline line, clipped at zero. Flagged as Acclimation Window per protocol.

Results Table

Metric	Blue: 5g dextrose + 2.5g GBP in 8oz	Orange: 5g dextrose only in 8oz	Delta
Window	02:30-04:05 95min	10:01-11:36 95min	Matched
Raw start/end	74 / 87	87 / 93	End adj +6 Blue
Adj Max	92.5 adj (91 raw)	106	-13.5 with GBP
Adj iAUC baseline matched	518.7 mg/dL*min	657.6 mg/dL*min	-21.1% lower Blue
Total Adj AUC	7839.5	9195.5	-14.7%
